

DS	Session	Graph	Question Information	Level 1	Challenge 89				
Question description A game consists of n rooms and m teleporters. At the beginning of each day, you start in room 1 and you have to reach room n. You can use each teleporter at most once during the game. How many days can you play if you choose your routes optimally? Constraints $2 \leq n \leq 500$ $1 \leq m \leq 1000$ $1 \leq a, b \leq n$ Input The first input line has two integers n and m: the number of rooms and teleporters. The rooms are numbered $1, 2, \dots, n$. After this, there are m lines describing the teleporters. Each line has two integers a and b: there is a teleporter from room a to room b. There are no two teleporters whose starting and ending room are the same. Output First print an integer k: the maximum number of days you can play the game. Then, print k route descriptions according to the example. You can print any valid solution.
