

DS	Session	Queue	Question Information	Level 1 Challenge 51
Problem Description The Monk recently learnt about priority queues and requested his teacher for a fun challenge to solve. As a result, his teacher devised a simple task. He now possesses A, which is an integer array. He wishes to discover the product of the greatest, second largest, and third largest integers in the range $[1, i]$ for each index i. Note: Two numbers can be the same value-wise but they should be distinct index-wise. Constraints: $1 \leq N \leq 100000$ $0 \leq A[i] \leq 1000000$ Input: The first line contains an integer N, denoting the number of elements in the array A. The next line contains N space separated integers, each denoting the ith integer of the array A. Output: Print the answer for each index in each line. If there is no second largest or third largest number in the array A upto that index, then print "-1", without the quotes.
