Question description You are given a list consisting of n integers. Your task is to remove elements from the list at given positions, and report the removed elements. Constraints • $1 \leq n \leq 2 \cdot 10^5$ • $1 \leq x_i \leq 10^9$ • $1 \leq p_i \leq n - i + 1$ Input The first input line has an integer n: the initial size of the list. During the process, the elements are numbered $1, 2, \dots, k$ where k is the current size of the list. The second line has n integers $x_1, x_2, \dots, x_n$: the contents of the list. The last line has n integers $p_1, p_2, \dots, p_n$: the positions of the elements to be removed. Output Print the elements in the order they are removed.
