

DS	Session	Tree 1	Question Information	Level 1 Challenge 62
Question description There are three common ways to traverse the nodes of a binary tree: • <i>Preorder</i>: First process the root, then the left subtree, and finally the right subtree. • <i>Inorder</i>: First process the left subtree, then the root, and finally the right subtree. • <i>Postorder</i>: First process the left subtree, then the right subtree, and finally the root. There is a binary tree of n nodes with distinct labels. You are given the preorder and inorder traversals of the tree, and your task is to determine its postorder traversal. Constraints • $1 \leq n \leq 10^5$ Input The first input line has an integer n : the number of nodes. The nodes are numbered $1, 2, \dots, n$. After this, there are two lines describing the preorder and inorder traversals of the tree. Both lines consist of n integers. You can assume that the input corresponds to a binary tree. Output Print the postorder traversal of the tree.				

▼ Logical Test Cases

Test Case 1
INPUT (STDIN)
5
5 3 2 1 4
3 5 1 2 4
EXPECTED OUTPUT
3 1 4 2 5

Test Case 2
INPUT (STDIN)
6
6 5 3 2 1 4
6 3 5 1 2 4
EXPECTED OUTPUT
3 1 4 2 5 6

▼ Mandatory Test Cases

Test Case 1
KEYWORD
<code>for(i=1;i<=n;i++)</code>

▼ Complexity Test Cases

Test Case 1
CYCLOMATIC COMPLEXITY
8

Test Case 2
TOKEN COUNT
390

Test Case 3
NLOC
41
