Question description Given an array of n integers, your task is to process q queries of the form: what is the minimum value in range $[a,b]$? Constraints $1 \leq n, q \leq 2 \cdot 10^5$ $1 \leq x_i \leq 10^9$ $1 \leq a \leq b \leq n$ Input The first input line has two integers n and q: the number of values and queries. The second line has n integers $x_1, x_2, \dots, x_n$: the array values. Finally, there are q lines describing the queries. Each line has two integers a and b: what is the minimum value in range $[a,b]$? Output Print the result of each query.
