

DS	Session	Tree 2	Question Information	Level 1 Challenge 72
Problem Description You are given an N-dimensional array A. You can execute an operation that removes the greatest and smallest elements from the array and replaces them with their difference. As a result, the array's size will drop by one after each operation. You are assigned Q jobs, each of which contains an integer K. After K operations, you must provide the total of all the items in the array for each task. Constraints: $2 \leq N \leq 10^5$ $1 \leq Q \leq 10^5$ $0 \leq A[i] \leq 10^9$ $0 \leq K < N$ Input: First line contains two space-separated integers N and Q, denoting the number of elements in array and number of queries respectively. Next line contains N space-separated integers denoting elements of the array. Next Q lines contain a single integer K. Output: For each task, print answer in a new line.				

▼ Logical Test Cases

Test Case 1

INPUT (STDIN)

```
5 2
3 2 1 5 4
1
2
```

EXPECTED OUTPUT

```
13
9
```

Test Case 2

INPUT (STDIN)

```
5 3
13 12 11 15 14
1
2
3
```

EXPECTED OUTPUT

```
43
35
15
```

▼ Mandatory Test Cases

Test Case 1

KEYWORD

```
for(i=0;i<n;i++)
```

▼ Complexity Test Cases

Test Case 1

CYCLOMATIC COMPLEXITY

```
4
```

Test Case 2

TOKEN COUNT

```
300
```

Test Case 3

NLOC

```
38
```
